Regulatory Challenges

What is required to comply with HIPAA?

As a covered entity and business associate you are required to assess the risk to the confidentiality, integrity and availability of ePHI. This
includes assessing the safeguards that your vendors' have in place to protect ePHI that they store, access, transmit or process for you.

RISK ANALYSIS: Conduct an accurate and thorough assessment of the potential risks and vulnerabilities to the confidentiality, integrity, and availability of electronic protected health information held by the third-party.

This is what NIST says:

- suring Contract Performance and Terminating the Contract if Security Requirements Are Not Being Met"
- "Conduct periodic security reviews."
 [5] See NIST SP 800-66, Section #4 "Considerations When Applying the HIPAA Security Rule." Available at http://www.hhs.gov/ocr/privacy/hipaa/administrative/securityrule/nist80066.pdf PDF.

"Based on tips from whistleblowers, HHS' Office for Civil Rights fined St. Elizabeth's Medical Center, part of Baston-based Steward Health Care, \$218,400 for using an Internet-based document sharing application to store documents containing PHI without first analyzing the risks associated with the platform. This lack of risk analysis put the PHI at risk."

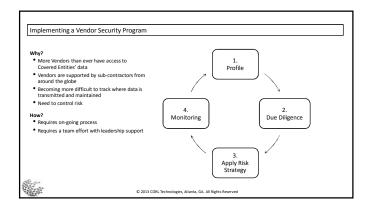

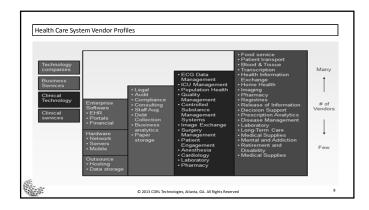

Regulatory Challenges Information surrounding Data Breaches? According to the BakerHostetler 2016 Data Security Incident Response Report, roughly 15% of Data Incidents were caused by Third Party Vendors the below diagram breaks down the different causes for Data Incidents during the 2016 study: % Distribution - Cause of Data Incident © 2013 CORL Technologies, Atlanta, GA. All Rights Reserved

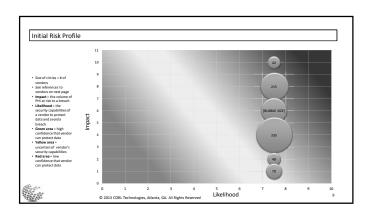

The Ponemon Institute: Tone at the Top and Third Party Risk

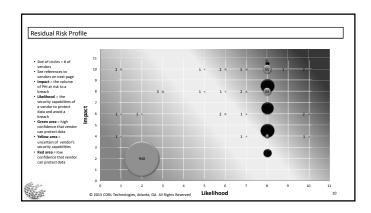

- Third party risk has substantially increased due to disruptive technologies including the Internet of Things (IoT) and migration to the Cloud.
- The consequences of not managing third party risk can be extremely costly, as organizations represented in this research spent an average of approximately \$10 million to respond to a security incident as a result of negligent or malicious third parties.
- Most third party risk management programs are generally informal and not effective, as most respondents admit that improving third party relationships is not a top risk management objective.

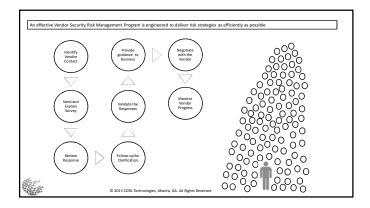

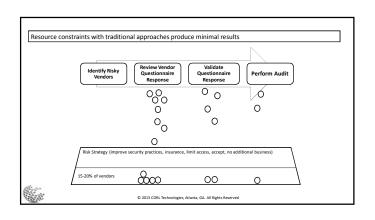

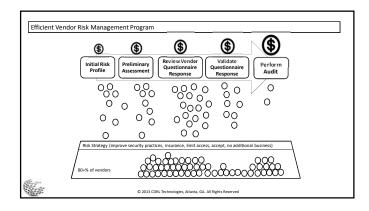

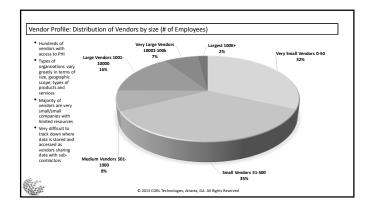

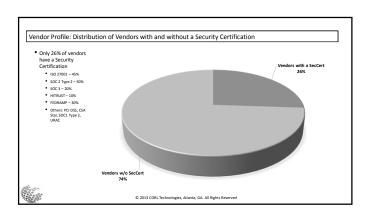

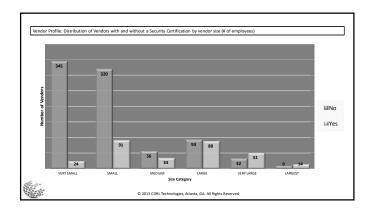

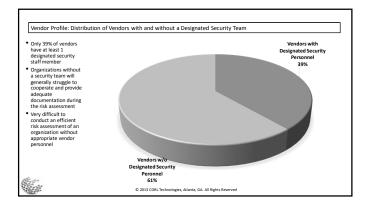

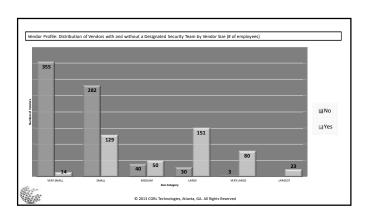

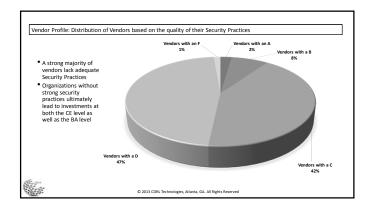

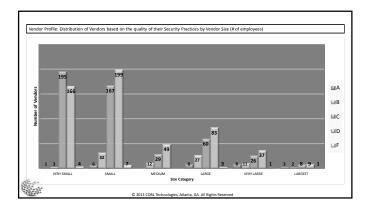

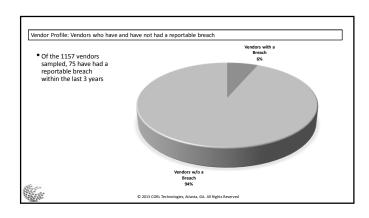

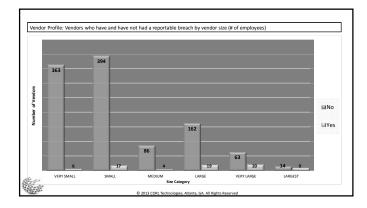

Leadership communication

Difficultly to accurately communicate risk exposure to leadership

Communication is inconsistent

Vendor communication and accountability

Communication is sporadic, inconsistent and unclear

Absence of linkage between vendor information management failures and contract management

Why are there Weaknesses

Seeing the forest for the trees...

Too busy gathering data...
...leaves limited time for risk management.

Unclear objectives for vendor information risk management...
....check the box' compliance or true reduction of risk?

Lack of executive level reporting.

Disconnect from contract management.

County And County	
Security Audits/Certification	
 SOC 2, Type II: covering security, availability, processing integrity, confidentiality and privacy, and applying your (sometimes CSA) standards, is the more comprehensive audit. 	
Type II means tested, Type I only noted as policy.	
 The term SSAE 16 alone can be interpreted as a SOC 1, focusing on controls only to the extent "material" to financial reporting. 	
ISO 27001: Int'l standard - certification for management frameworks for security. (ISO 27017 is new cloud-	
specific standard)	
PCI-DSS 3.0 standard: Security of payment networks. CSA Cloud Controls Matrix (CCM): cloud security playbook	
FedraMP: federal standard

Red Flags for Initial Security Assessment	
 Assessment partially completed and vague responses "We already performed a security assessment & everything was fine." 	
"We've been in the industry a long time and nobody has asked us these questions before."	
"HIPAA doesn't require that we answer these questions."	
• "We don't need to do a security assessment because it's a big company and they have good security."	
 "You don't need to worry; we only capture employee data, not patient data." 	
 Refusal to let you contact the subcontractor who is actually handling the data

Care New England Health System (CNE): Third-party Breach	
Care New England Health System (CNE) has agreed to pay \$400,000 and employ a corrective action plan to settle HIPAA violations.	
 The breach, which was reported to the OCR in 2012 by Women and Infants Hospital in Rhode Island, a business associate of CNE, included missing unencrypted backup tapes that held PHI of some 14,000 individuals. 	
 The business associate agreement between the two entities, originating in 2005, had not been updated until the 2015 OCR Investigation, and did not incorporate revisions required under the HIPAA Omnibus Final Rule. 	
http://www.healthcareitnews.com/news/care-new-england-pays-400000-hipaa-fine-lost-phi-business-associate-breach	
As we see in this particular case, vendor/B.A. security can be the unlocked backdoor to healthcare data. As the	-
healthcare provider, it is ultimately your responsibility to safeguard Protected Health Information, and perform due diligence on vendors with PHI access.
