

## TRADITIONAL IT SYSTEM SAND APPLICATIONS

- Electronic Health Record Applications
- Clinical Systems
- MedialBilling/ClainsProcessingApplications
- EmailApplications
- HRApplications
- NetworkFileSharingApplications
- Payment Processing Systems
- Financial Management/Reporting Applications

Point:Considerallpossible traditional IT systems that could have sensitive data.

## BIOMEDICALDEVICES

- Patientmoniloring devices, smart tooms
  - Smartmedialdevies, infusion pumps, ventilators, inclustors, telemetry, medial inaging
  - Electrocardiogram (KG), pulse oximetry, ventilators, capnographymonitors
  - Pulmonologymachines
  - Snartbeds, fall detection
  - Remote III telemetry, Tele-ology
- Remotewellhessandchronizdisessemanagement.
  - Peremakers, defibrillators and neuro-strinulators
  - Wearablewristbands, bio-patches, smartwatches, diniral monitorspirometer, pulse oximeter

Point:No longeran "IT issue." Comprom ise of biomedical equipment directly affects patients affety.

IT Grey Castle

## INTERNETOFTHINGS

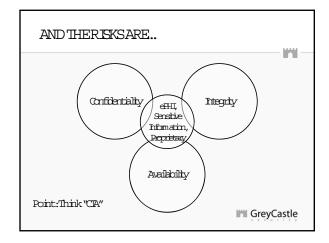

- FealthesSearty, Building Management.
  - Videosurveillance, door boks and entry systems, and file alarms
  - Rowermantoring, powerdistribution, energy consumption and management, and elevators
  - HVAC, lighting, non-control, waterquality, hum tilty monitoring, tissue and blood refrigeration
  - Acceptance
- Networking Handware, Software, Security, Services
  - Routers, Switches, IAN, Wielessouters
  - Operating systems, Network Security and Services

Point: Think beyond the known system sand applications. Don't forget background system sand infrastructure.

## RISKASSESSMENT FUNDAMENTALS

- Likelhood:The inherent pubeloility of a theatocuring, without considering existing controls
- Impact: The potential significance of a theat, without considering existing controls
- Risk Rector: The estimated percentage of um ligatedrik, considering existing controls
- Critical Output: Risk Register

Point: Must have asset-threat-vulnerability-in pact

RISK

## RISKASSESSMENT FOR HEALTHCARE CRASH COURSE

1.DEIERM INESCOPE AND RISKUNIVERSE	
2.IDENTIFYDATA SOURCES	
	-
3.FINALIZERISK CATEGORIES TO BE ASSESSED	

4.EVALUATE CONTROLS FOR RISKM ITGATION	
5.CALCULATERISK SCORESAND PRIORITZE	
6.CATEGORIZEKEY COMPLIANCE PROGRAM CONTROLS	

7. DENTIFY CONTROL GAPSAND DEFICIENCES	
8.SUBSTANTIATERISK ASSESSMENTRESULTS WITH SENIOR MANAGEMENT	
9.IM PLEMENT CORRECTIVE ACTION PLAN	

## 10.INCORPORATE RESULTS INTO REVIEW S AND MONTIORING

## NISTRISK ASSESSMENT PROCESS

- Finalize Information Asset Truentory
- DentifyTheets&Vuherabilties
- Determine Likelihood & Tinpact
- Determine Risk Level
- Determine Risk Tleatment

Point: Comprehensive risk assessment is to determ in e how sensitive information may be compromised.

Riskmaybe:1)Accepted2)Miligated3)Transferred4)Avoided

## RISKASSESSMENT: BIOMEDICALEQUIPMENT

Senario: Am id-size hospitals, stem with one ambulatory care unit and asmall brog-term care unit wants to start an audit of their biomedical devices. Such an audit has neverbeen performed before.

Challenge:Wheretobegin?How do Iassessrisk?
